

Practical Tasks:

PART 1: BOX PLOT TASKS

Task 1:

Create a box plot using a new list:

```
data = [5, 15, 20, 22, 35, 60, 80]
```

Task 2:

Change the box plot title to:

→ "My First Custom Box Plot"

Task 3:

Add an x-axis label to the box plot:

→ "Sample Data"

Task 4:

Remove the grid from the box plot.

(Hint: Don't use plt.grid())

Task 5:

Create a box plot for **4 subjects** instead of 3:

Math, Science, English, Hindi

```
hindi = [70, 72, 75, 80, 85, 90]
```

Task 6:

Change the color of the box plot using:

```
patch_artist=True
```

```
boxprops=dict(facecolor='lightblue')
```

Task 7:

Create a title for subject marks box plot:
→ **"Student Subject Marks Distribution"**

PART 2: WORD CLOUD TASKS

Task 8:

Create a word cloud using your own text:
→ "I love Python. Python is awesome. Learning data science is fun."

Task 9:

Change the background color of the word cloud to:
→ **yellow**

Task 10:

Generate 3 word clouds using different colormaps:

- **cool**
 - **plasma**
 - **spring**
-

Task 11:

Limit the word cloud to **max_words = 20**.

Task 12:

Read text from a new file:
→ **new_para.txt**
(Create the file yourself)

Task 13:

Change the word cloud size to:
→ **width = 1000, height = 600**

Task 14:

Save your word cloud image using:

```
wc.to_file("my_wordcloud.png")
```
