

Pandas Starting Tasks

Dataframe, Series and Data Loading

📌 Level 1: Basic Series & DataFrame Tasks

Task 1: Create a Series

1. Create a **Pandas Series** from this tuple:
`("Python", "Django", "Pandas", "NumPy")`
 2. Set the index manually as: `['A', 'B', 'C', 'D']`
 3. Print the Series
-

Task 2: Create a Simple DataFrame

1. Create a DataFrame from the dictionary:

```
{  
  "Name": ["Amit", "Riya", "Sumit"],  
  "Age": [20, 21, 22],  
  "Marks": [80, 85, 90]  
}
```

2. Print the complete DataFrame
 3. Print only the `Name` column
-

Task 3: Rows & Columns Count

1. Print:
 - Number of rows
 - Number of columns of the DataFrame
-

□ Level 2: CSV File & Inspection Tasks

Dataset: `netflix_titles.csv`

Task 4: Head & Tail

1. Display the first 5 rows
 2. Display the last 7 rows
-

Task 5: Dataset Information

1. Run `df.info()`
 2. Answer:
 - How many total columns are there?
 - Which columns contain missing values?
-

Task 6: Describe the Dataset

1. Run `df.describe()`
 2. Write the summary for numerical columns
 3. Find:
 - Maximum `release_year`
 - Minimum `release_year`
-

□ Level 3: Column Selection Tasks

Task 7: Single Column Selection

1. Display the `type` column
 2. Display the first 10 values of the `release_year` column
-

Task 8: Multiple Column Selection

1. Select the columns:
`title, type, release_year`
 2. Display the first 8 rows
-

Task 9: Missing Values Analysis

1. Identify which column has the highest number of missing values.
-
